Contents

Preface	ix
Introduction	1
Chapter 1. A Comparative Survey of Conversational Methods	19
1. Introduction	19
2. Operating systems	28
3. Less restrictive operating systems	44
Chapter 2. Conversational Domains	49
1. Syntactic and semantic components of a thesis	54
2. Description methods and the semantic component of a thesis	57
3. Some useful operations upon entailment meshes	68
4. Derivations	75
5. The significance of analogy relations	78
Chapter 3. Some Educationally Relevant Studies of Learning	80
1. Embedding and fixity	82
2. Style of learning	83
3. Disposition competence and learning style	106
4. Notes on the character of competence mechanisms	126
5. Rate of learning, analogy relations and versatility	128
Chapter 4. Theoretical Developments	131
1. General and non-classical language, logic and models	132
2. Fuzzy predicates	138
3. Fuzzy programs	140
4. Specialisations and notation	141
5. Identification of principal cognitive operations	142
6. Generalisation of entities in the conversational domain	145
7. Different truth criteria and truth values	147
8. Agreement and common meaning	149

9. Common meaning and analogy relations	153
10. Understanding of an analogy relation: explanation	157
11. Understanding of an analogy relation: derivation	159
12. The act of constructing an analogy relation	162
Chapter 5. Description Building and Procedure Building	164
1. The global and local distinction	165
2. Description building	166
3. Procedure building	167
4. The exteriorisation of an understanding	168
5. Combining operations	169
6. Comments on the PC operations	170
7. Interpretation in terms of machine cognition and abstract systems	171
8. Experimental possibilities due to the DP/PB distinction	174
9. Paradoxical features of the competence results	179
10. Analogical transformations	180
11. Innovation and generalisation based analogy relations	181
Chapter 6. Conversations With Many Aim Topics	185
1. Generalisation to conversation with many participants or many aim topics	186
2. Identification within the generalised theory of language	195
3. General discussion	199
4. Two aims, one to each of two users	201
5. Improved operating systems for two users	208
6. Operation	210
7. The meaning of stable configurations with mutual hypotheses	211
8. Common meaning agreement in a hybrid system	214
9. P-Individuals, the focus of attention and one or more aim topics	215
10. Attention and "parallel activity" as a "pseudo-problem"	217
11. Attentional uncertainty	222
Chapter 7. Innovation and the Operation of THOUGHTSTICKER	225
1. Introduction	225
2. Informal discussion	226
3. Innovation and counterfactuality	241
4. The integrity of P-individuals and of perspectives	245
5. Experimental studies	247
Chapter 8. Modus Operandi and Means for Encouraging Innovation	258
1. Modelling facilities for concrete models	258
2. The construction grid and the cognitive model	260
3. Cooperative interaction	275
4. Another view of aim initiation	277
5. Specific procedures	277
Chapter 9. Comparison of Course Assembly Systems: Their Use in Teaching People to Learn	281

1. Procedural comparison between THOUGHTSTICKER and other operating systems	282
2. Alternative and macrotheoretic distinction between operating systems	284
3. An operational definition of learning to learn: its relation to innovation	285
4. Classroom experience	289
5. Discussion	294
 Chapter 10. An Attempted Integration of Theories of Creativity and Innovation	296
1. Existing theories and their common features	297
2. A general representation	300
3. Comparison of theories	306
4. Merit in identifying theories of innovation	330
5. Prediction and pragmatism	331
6. Relevance in education	332
 Chapter 11. General Conclusions and Recent Developments	334
1. Character representation	334
2. Education particulars	336
3. A closer look at the conversational language L	340
4. Conditions for individuality	343
5. Why not call L-processors brains and leave it at that	343
6. Educational media	347
7. A conversational view of child psychology	352
8. Comparative study of data	356
 Appendices	
A. Intuition operating rules	362
B. A simple model for an L-processor	375
C. Details of compromise procedures for "learning to learn" experiments	378
 References	382
 Subject Index	393
 Name Index	400
